Abstract

From English To Arabic

Abstract (summary) Translate

To determine fourth-year Canadian pharmacy students' knowledge of herbal medicine, standardized multiple-choice knowledge tests were distributed to all fourth-year BSc pharmacy students at 5 postsecondary institutions in Quebec. The Quebec response rate was too low to include in the analysis. Herbal knowledge tests were associated with having previously taken an herbal medicine class and completion of a postsecondary education program. However, postsecondary education, age, and gender were not associated with herbal knowledge test scores. Students at the University of British Columbia had the highest score, followed by Algonquin College in Ontario. Pharmacy students' knowledge of herbal medicine varies depending on the school attended. Test scores appear to be most closely related to mandatory herbal instruction.
